

Antigravity Build Prompt Student Habit Tracker Diary

Antigravity Build Prompt — Student Habit Tracker Diary

Paste everything below into Antigravity as your project brief.

PROJECT OVERVIEW

Build a full-stack web app called a “Daily Diary / Habit Tracker” for a student cohort. There are two roles: **Student** and **Mentor**. Students log daily tasks and get points after mentor approval. Mentors review diaries, award points, mark attendance, and leave optional daily suggestions. There’s a leaderboard visible to both roles.

Stack: Next.js (App Router) + Supabase (Postgres, Auth, Row Level Security) + Tailwind CSS.

AUTH & ROLES

- Two account types: `student` and `mentor`.
- Signup form fields: **Full Name (required, not optional)**, Email, Password, **Access Code (required)**.
 - One shared access code for all students, one separate shared access code for mentors. Store both in an `access_codes` table (`role` , `code`) so they can be rotated from an admin screen without a redeploy — don’t hardcode them in the frontend.
 - Seed the 4 mentor accounts manually at launch (mentor role assigned directly in Supabase, not via self-signup) so you control exactly who has mentor access.
- On login, show **“Welcome, {Full Name}”** on the homepage/dashboard header, using the exact name string the user typed at signup.
- Use Supabase Auth for session management. Use **Row Level Security** so:
 - A student can only SELECT/UPDATE rows in `daily_logs` where `user_id = auth.uid()`.
 - A student can INSERT/UPDATE the text `content` field of their own task entries but cannot edit `points_awarded` or `approved` fields — those are mentor-only (enforce via RLS policy + separate mentor-only update permissions).
 - A mentor can SELECT all students’ `daily_logs` , `attendance` , and `feedback` .
 - Mentors identified by a `role = 'mentor'` flag in the `profiles` table, checked in RLS policies.

DATA MODEL (Postgres / Supabase)

```
profiles
  id (uuid, FK to auth.users)
  full_name (text, not null)
  role (enum: 'student' | 'mentor')
  created_at

access_codes
  id
  role (enum: 'student' | 'mentor')
  code (text) -- one active code per role, checked on signup
  updated_at
  updated_by (uuid, FK profiles) -- mentor who last rotated it

tasks
  id
  title (text)
  sort_order (int) -- controls display order on the diary page
  points (int, default 1)

daily_logs
  id
  user_id (uuid, FK profiles)
```

```

log_date (date)
sleep_hours (numeric, nullable)
weight (numeric, nullable)
eat_smart_breakfast (text, nullable)
eat_smart_lunch (text, nullable)
eat_smart_tea (text, nullable)
eat_smart_dinner (text, nullable)
total_cals (numeric, nullable)
reflection_notes (text, nullable) -- "students can write their thoughts"
created_at
UNIQUE(user_id, log_date)

task_entries
id
daily_log_id (FK daily_logs)
task_id (FK tasks)
content (text) -- the student's paragraph/answer
submitted_at (timestamp, nullable) -- set when content is first saved
approved (boolean, default false) -- mentor confirms
approved_by (uuid, nullable FK profiles)
points_awarded (int, default 0)
mentor_note (text, nullable) -- optional inline comment on this entry
UNIQUE(daily_log_id, task_id)

attendance
id
user_id (FK profiles)
date (date)
status (enum: 'present' | 'absent' | 'late')
marked_by (uuid, FK profiles) -- mentor
UNIQUE(user_id, date)

feedback
id
user_id (FK profiles) -- student who submitted, or mentor
submitted_by_role (text)
message (text)
created_at

mentor_suggestions
id
mentor_id (FK profiles)
student_id (FK profiles)
date (date)
suggestion (text) -- optional, one per student per day

```

Leaderboard = SUM(points_awarded) from task_entries joined to daily_logs , grouped by user_id , filterable by date range (today / this week / this month).

TASK LIST — EXACT ORDER (CONFIRMED)

Every card is a **paragraph/data entry box**, not a checkbox — the student writes actual content into a textarea (or a numeric/structured field for the tracker-style ones), and a task only becomes “submitted” once there’s content in it. Mentor reads the entry and approves it for the point. Cards: rounded-corner (~12px radius), soft black outline, off-white background, clean sans-serif headers — matches a printed planner, not a SaaS dashboard. **Classroom tasks show first**, then the rest, in this order:

Classroom tasks (top of page) — completed during class: 1. Master the Mic — textarea 2. Mind Gym — textarea 3. World Watch — textarea 4. Smart Tools Mastery — textarea, sub-label “Mention the use” 5. Brain Boost — textarea 6. Startup Garage — textarea

Remaining tasks (own-time, rest of the diary): 7. Fit & Strong — textarea 8. Real-World Problems — textarea 9. Power Circles — textarea, sub-label “Name & Designation” 10. Level Up Look — textarea 11. Talk Like a Pro — textarea 12. Build Your Brand — textarea 13. Impact Hour — textarea 14. Life Hacks Lab — textarea 15. Do & Learn — textarea 16. Growth Fuel — textarea 17. Sleep — numeric input, hours (structured field, not free text) 18. Eat Smart — structured fields: Breakfast / Lunch / Tea & Snacks / Dinner (each a short text entry) + Total Cals (numeric) 19. Weight — numeric input 20. Prayer / Meditation — textarea (or simple toggle if the student wants it treated as a pure checklist item rather than a written entry — your call, but textarea keeps it consistent with the other 19)

All 20 = 1 point each on mentor approval, 20 points max per day per student.

PAGES / SCREENS

Student: - `/login` , `/signup` (with invite code + required name field) - `/dashboard` — “Welcome, {name}”, today’s diary card, 20 entry boxes in order above, autosaving textareas, shows status per box (empty / submitted / approved + points) - `/history` — past days’ diaries, read-only - `/leaderboard` — filter: Daily / Weekly / Monthly, highlight current period’s #1 as “Winner of the Week” (or day/month) - `/feedback` — submit a feedback form

Mentor: - `/mentor/login` (mentor invite code) - `/mentor/dashboard` — search/select a student by the exact name they signed up with, view their diary for a chosen date - `/mentor/review` — read each submitted entry’s full text, approve per task to award the point, optionally leave a `mentor_note` on any entry - `/mentor/attendance` — mark present/absent/late per student per day - `/mentor/suggestions` — optional daily note to a specific student - `/mentor/feedback` — mentor’s own feedback form - `/leaderboard` — same view as students, read access to everyone

KEY BEHAVIORS TO IMPLEMENT

1. Signup: Full Name is a required field, validated non-empty, stored verbatim.
 2. Access code checked against `access_codes` table for the selected role at signup — wrong code blocks account creation with a clear error, no silent fallback.
 3. Student writes into a task’s entry box → on save, creates/updates a `task_entries` row with `content` , sets `submitted_at` , `approved` stays false. Empty content = not submitted, shows as an open/incomplete card, not “pending.”
 4. Once content exists, card shows “Submitted — pending review.” Mentor reads the `content` , optionally leaves a `mentor_note` , then approves → sets `approved = true` , `points_awarded = tasks.points` , `approved_by = mentor id` .
 5. Leaderboard recalculates from approved points only — submitted-but-unreviewed entries don’t count yet.
 6. RLS enforced at the database level, not just hidden in the UI — a student hitting another student’s data via the API should get a permission error, not just a hidden button.
 7. Mentor suggestions and feedback forms are optional — no blocking validation.
 8. Autosave the textarea on blur or every few seconds — students writing paragraphs will lose work on a refresh otherwise. Don’t make them hit a manual “save” per box.
-

STYLE NOTES

Match the reference image’s feel: rounded rectangle cards (~12px radius), thin black borders, generous whitespace, minimal sans-serif type, no heavy shadows or gradients — looks like a printed planner, not a SaaS dashboard.
